

Hey friend!

Thanks for purchasing an HX preset.

Here are a few steps to make the best of it:

1. You will need to download **HX edit** free software from the Line 6 website, in order to upload the preset into your device.

You can find it here: <https://line6.com/software/>

Make sure to choose the right Device and operating system that you are using.

2. From the **HX edit** software, make sure your device is updated to the latest firmware version.

3. If the preset you have purchased needs use of an expression pedal (wah wah, whammy...), I always define it as EXP 1.

If your expression pedal doesn't work with the preset, try disconnecting it and plugging it right back in (while device is ON). If that doesn't work, make sure you choose EXP 1 in the pedal settings.

4. If the preset you have purchased needs use of 3 foot switches, make sure you define that in your pedal settings.

5. We use different guitars, cables, monitors... fingers. You might need to tweak the EQ and Gain settings in order to dial in the sound better, to match with your gear.

6. If you have any ideas for more presets for me to make, I would love to hear back from you, and put it on my TO DO list.

Just drop a line at: [dannywmusic@gmail.com](mailto:dannywmusic@gmail.com)

Have fun!!!

All the best.

Danny.
